

## **Presentation Builder**

Often the most up-to-date information on your company, your products and your services resides on your Web site. But there is still the need to have print materials for presentations and proposals. Presentation Builder makes it easy to produce high-quality documents directly from the content on your Web site.

You simply add the pages you want to the Presentation Folder, then output the contents to a PDF or a printer. It's that easy.

**Try it!**
